<https://1drv.ms/f/s!AvI7wzKf6QBjgRnc2tStvlhD7fYO> QUESTION 51 In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem. Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals. Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2. Contoso.com has the following configuration:

```
PS C:\> (Get-ADForest). ForestMode
Windows2008R2Forest

PS C:\> (Get-ADForest). DomainMode
Windows2008R2Domain

PS C:\>
```

You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration. You need to configure Active Directory to support the planned deployment. Solution: You raise the domain functional level to Windows Server 2012 R2. Does this meet the goal? A. Yes B. No Answer: A QUESTION 52 Hotspot Question You have a server named Server1 that runs Windows Server 2016. Server1 has the Web Application Proxy role service installed. You publish an application named App1 by using the Web Application Proxy. You need to change the URL that users use to connect to App1 when they work remotely. Which command should you run? To answer, select the appropriate options in the answer area.

Answer:

QUESTION 53 You have a failover cluster named Cluster1. A virtual machine named VM1 is a highly available virtual machine that runs on Cluster1. A custom application named App1 runs on VM1. You need to configure monitoring of VM1. If App1 adds an error entry to the Application event log, VM1 should be automatically rebooted and moved to another cluster node. Which tool should you use? A. Hyper-V Manager B. Failover Cluster Manager C. Server Manager D. Resource Monitor Answer: B QUESTION 54 Hotspot Question Your network contains an Active Directory domain named contoso.com. The domain contains four servers named Server1, Server2, Server3, and Server4 that run Windows Server 2016. Server1 and Server2 are nodes in Hyper-V cluster named Cluster1. You have a highly available virtual machine named VM1. Server1 is the owner node of VM1. Server3 and Server4 are nodes of a scale-out file server named Cluster2. The storage on Server1 is configured as shown in the following table:

	Location	
C:\ClusterStorage\Volume1		iSCSI
E:\		An iSCSI
\\Cluster2\Share1		A file share

You need to move the virtual disk of VM1 to a different location. What should you do? To answer, select the appropriate options in the answer area.

the answer area

Answer:

QUESTION 55 You are configuring a Windows Server 2016 failover cluster in a workgroup. Before installing one of the nodes, you run the ipconfig /all command and receive the following output

```

Windows IP Configuration

Host Name . . . . . : Server1
Primary Dns Suffix . . . . . :
Node Type . . . . . : Hybrid
IP Routing Enabled. . . . . : No
WINS Proxy Enabled. . . . . : No
DNS Suffix Search List. . . . . :

Ethernet adapter Ethernet:

Physical Address. . . . . :
PnP Enabled. . . . . : Yes
Autocofiguration Enabled. . . . . : Yes
Link-Local IPv6 Address. . . . . : fe80::754b:1660:b4fc:105ab%12 (Preferred)
IPv4 Address. . . . . : 192.168.1.154 (Preferred)
Subnet Mask . . . . . : 255.255.255.0
Default Gateway . . . . . : 192.168.1.10
DHCPv6 IAID . . . . . : 867099429
DHCPv6 Client DUID. . . . . : 00-01-00-01-1A-1D-5D-60-00-02-75-4E-14-85
DNS Servers . . . . . : 192.168.1.32
NetBIOS over Tcpip. . . . . : Disabled
    
```

You need to ensure that Server 1 can be added as a node in the cluster. What should you do? A. Assign a static IP address B. Change the Node Type to Broadcast C. Configure a DNS suffix D. Enable NetBIOS over TCP/IP Answer: C QUESTION 56 You have a server named Server 1 that runs Windows Server 2016. The disk configuration for Server 1 is shown in the exhibit

You add Server1 to a cluster. You need to ensure that you can use Disk1 (or Storage Spaces Direct). What should you do first? A. Delete Partition (E:) B. Set Disk1 to offline C. Convert Disk 1 to a dynamic disk D. Convert Partition (E:) to ReFS Answer: A QUESTION 57 Hotspot Question Your network contains an Active Directory forest named contoso.com. The forest contains an Active Directory Federation Services (AD FS) farm. You install Windows Server 2016 on a server named Server2. You need to configure Server2 as a node in the federation server farm. Which cmdlets should you run? To answer, select the appropriate options in the answer area.

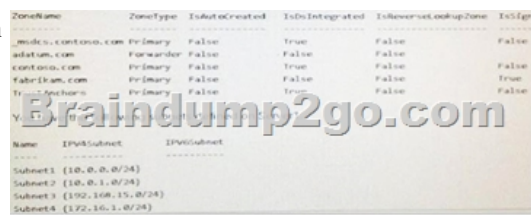

QUESTION 58 Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. You have a Hyper-V host named Server1 that runs Windows Server 2016 and a two-node scale-out file server cluster named Cluster1. A virtual machine named VM1 runs on Server1. You need to migrate the storage on VM1 to Cluster1. Which tool should you use? A. the clussvc.exe command B. the cluster.exe command C. the Computer Management console D. the configurehyperv.exe command E. the Disk Management console F. the Failover Cluster Manager console G. the Hyper-V Manager console H. the Server Manager Desktop app Answer: G

QUESTION 59 Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. You have a two-node Hyper-V cluster named Cluster1. As virtual machine named VM1 runs on Cluster1. You need to configure monitoring of VM1. The solution must move VM1 to a different node if the Print Spooler service on VM1 stops unexpectedly. Which tool should you use? A. the clussvc.exe command B. the cluster.exe command C. the Computer Management console D. the configurehyperv.exe command E. the Disk Management console F. the Failover Cluster Manager console G. the Hyper-V Manager console H. the Server Manager Desktop app Answer: F

QUESTION 60 In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem. Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals. Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration

ZoneName	ZoneType	IsAutoCreated	IsDnsIntegrated	IsDnsServerSet.coopZone	IsDns
multic.contoso.com	Primary	False	True	False	False
adatum.com	Forwarder	False	False	False	False
contoso.com	Primary	False	True	False	False
fabrikam.com	Primary	False	False	False	True
truncatum.com	Primary	False	True	False	False

Braindump2go.com

Name	IPv4Subnet	IPv6Subnet
Subnet1	{10.0.0.0/24}	
Subnet2	{10.0.1.0/24}	
Subnet3	{192.168.15.0/24}	
Subnet4	{72.16.1.0/24}	

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients. Solution: From a Group Policy object (GPO) in the domain, you modify the Network List Manager Policies. Does this meet the goal? A. Yes B. No Answer: B !!!RECOMMEND!!! 1.
